

— REMOTE GAMING SERVER

The house always settles.

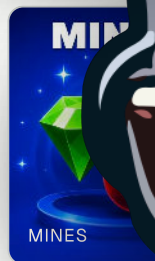

A casino games supplier delivered over **one API**. 68 provably-fair titles, a **sub-3ms atomic settle**, and every balance still on your ledger — you keep the wallet, we own the math.

68 games

5 categories + PvP

REST + gRPC wallet

Live in production

— WHAT IS FASTGAMESAPI

A games supplier you plug in **once**.

FastGamesAPI is a remote gaming server (RGS): a full shelf of casino games delivered to your platform over a single REST endpoint, settled against your wallet over gRPC. You integrate **one time** — every title on the shelf, present and future, arrives through the same `/api/v1/bet` call and the same two wallet operations.

68 GAMES READY	<3_{ms} SETTLE LATENCY	16+ CURRENCIES	150_k REQ/SEC/NODE	99.9% UPTIME
--------------------------	---	--------------------------	--	------------------------

01 / DELIVERY

One REST endpoint, one gRPC wallet

All 68 games run on the same pure-Go engine and resolve through `/api/v1/bet`. Your backend calls it; the RGS plays the round and settles. gRPC edge with per-operator IP allow-listing.

02 / CUSTODY

You keep the wallet — zero custody

Operator owns every balance. We never hold player funds. Money moves only through your wallet service, called back over **gRPC + mTLS** on every round.

03 / FAIRNESS

Provably fair, verifiable by anyone

Every outcome is **HMAC-SHA256(server_seed, client_seed:nonce)**, committed before play and publicly checkable at `/api/v1/seed/verify`. The audit trail is the product.

04 / SPEED

Sub-3ms atomic settle

A full round-trip — **debit, play, settle**, both wallet ops included — clears in under 3ms. Pure Go, in-memory cache, ~150K req/sec/node at 99.9% uptime.

05 / RTP

Dynamic RTP, per game, per player

Set return-to-player **85–99%** at game-init, snapshotted into every round, deterministic and **never above 100%**. Different players can run different RTP on the same integration.

06 / ANALYTICS

A metrics ledger, per round

Per-round **GGR** by game, currency, site and environment, with round forensics and real-time health. Reconcile any bet against your wallet with **GetTransaction**.

— THE REQUEST PATH

PLAYER Game client iframe / SDK	YOU Operator backend session + wallet	US FastGamesAPI RGS <code>/api/v1/bet</code>	YOU Your wallet gRPC · atomic settle
---	---	--	--

Client → your backend → RGS → your wallet. The money never leaves your ledger — **we return the math, you move the balance**.

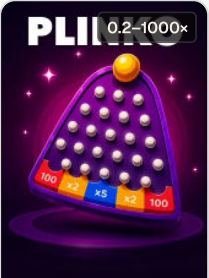

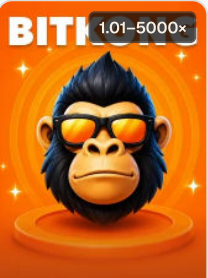

— THE PORTFOLIO

68 games, five categories, one engine.

Originals, crash & mine games, and a full table & card floor — each provably fair, each on the same wallet integration. A selection of the shelf follows; the complete library lives at fastgamesapi.com/catalogue.

Originals 8 TITLES

Fast, transparent, one-tap staking — pick your odds and settle instantly.

 DICE 1.01–99×	 PLINKO 0.2–1000×	 LIMBO up to 1M×	 KENO 1–1000×	 BITKONG 1.01–5000×	 WHEEL 1.5–50×
Dice Pick your odds, instant settle	Plinko Drop the ball, ride the pegs	Limbo Set a target, beat the crash	Keno Mark your spots, match the draw	BitKong Climb the ladder, cash out high	Wheel Spin the risk, land the multiplier

Crash & Mine 11 TITLES

Nerve games — cash out before it blows, reveal before you hit the bomb.

 CRASH 1x–∞	 HIPIGA CRASH 1x–∞	 MINES up to 24000×	 TOWER 1.1–2500×	 PUMP up to 25000×	 GOLD RUSH 1.01–2500×
Crash Rising curve, cash out in time	Hipiga Multiplayer crash, shared round	Mines Reveal gems, dodge the bomb	Tower Climb safe tiles, bank each floor	Pump Inflate the multiplier, don't burst	Gold Rush Dig for gold, skip the dynamite

Table & Cards 11 TITLES

The classic floor — blackjack, baccarat, roulette and regional favourites.

 BLACKJACK 2–2.5×	 BACCARAT 1.95–9×	 ROULETTE 2–36×	 VIDEO POKER 1–800×	 BARBUT 1.96–1782×	 KILIC 2–14×
Blackjack Hit or stand, beat the dealer	Baccarat Player, banker or tie	Roulette Place chips, spin the wheel	Video Poker Hold cards, draw the best hand	Barbut Two-dice street classic	Kilic Draw high, take the pot

THE PORTFOLIO, CONTINUED

Slots, arcade & player-versus-player.

Thirty-plus slot themes on one RTP-validated reel engine, a skill & arcade shelf, and a winner-takes-pot duel suite — all on the same integration.

Slots 30+ THEMES

One reel engine, thirty-plus skins — cascading wins up to 5000x+.

Egypt
Pharaoh reels, up to 5000x

Fruit
Classic fruit, modern math

Cyber
Neon reels, up to 7500x

Gem
Cluster gems, big lines

Olympus
Gods of the reels

Norse
Runes and thunder

Samurai
Blade-sharp spins

Vault
Crack it, up to 10000x

Genie
Wishes on the reels

Vortex Hold
Hold & win, to 12000x

Plus Pirate, Candy, Space, Atlantis, Aztec, Dynasty, Frost, Heist, Leviathan, Mecha, Reef, Shamrock, Sushi, Tiki, Wizard, West & more — 30+ themes on one validated engine.

Skill & Arcade 10 TITLES

Aim, cross, scratch — instant games with a bit of player agency.

Penalty
Pick a corner, beat the keeper

Chicken Road
Cross lanes, dodge traffic

Scratch Cards
Scratch, match, win instantly

Horse Racing
Back a runner, watch it home

PvP / Duel WINNER-TAKES-POT

Player against player, house takes a fixed rake — equity abandonment settlement.

War Duel
High card wins the pot

RPS Duel
Rock-paper-scissors, live

Coinflip Duel
Heads or tails, one pot

High Dice
Highest roll takes it all

— WHY OPERATORS PICK US

Math you can audit. Money you **keep**.

Certainty is the product: a fairness scheme anyone can verify, a wallet you never hand over, and an RTP that is bounded by design.

— PROVABLY FAIR · COMMIT → REVEAL

01

Commit

Before play we publish `sha256(server_seed)` — the outcome is locked, not yet known.

02

Play

Your `client_seed` + a per-bet `nonce` feed `HMAC-SHA256` to draw the result.

03

Reveal

After the round we reveal the `server_seed`; it must hash to the earlier commit.

04

Verify

Anyone re-checks the round at `/api/v1/seed/verify` — no trust required.

— THE WALLET — TWO CALLS

Zero custody, atomic settle

You expose exactly two capabilities over gRPC + mTLS. Balances never leave your ledger.

- **GetTransaction** — read a round back for reconciliation and dispute resolution.
- **Atomic SettleBet** — `ATOMIC_SETTLE_V1` debits stake and credits winnings in a single call, halving wallet round-trips on most games.

— THE MARGIN — DYNAMIC RTP

Bounded 85–99%, never over 100%

Set return-to-player per game at init; it is snapshotted into every round and is fully deterministic.

- Per-game, per-player — different RTP on the same integration.
- Per-currency, per-game **bet limits** enforced server-side.
- Per-round **GGR** reporting by game, currency, site & environment.

— INTEGRATION · HOURS TO FIRST BET

1

Sandbox

Play-money keys, no card. Build against all 68 games and a sub-3ms settle, free.

2

Conformance

Connect your wallet and pass the conformance suite — GetTransaction + atomic settle.

3

Go live

Fill production wallet + webhook, clear the two-gate go-live, and you're taking real rounds.

— TWO WAYS TO BUY

Pricing set per operator — **your call.**

Pick the model that fits your book. Both come with the full integration, the same games and the same settle. Admin-set per operator, switchable as you grow.

MODEL A

Flat platform fee

A granted game set at a fixed monthly cost. Predictable spend, and you keep the full margin on every round you take.

- **Fixed cost** — budget with no surprises.
- **Full margin** — the house edge is entirely yours.
- **Granted game set** — the titles you choose, live.
- Best when volume is steady and known.

MODEL B

GGR revenue share

A low fixed base plus a share of gross gaming revenue, reported per round. Costs stay small early and scale only as you win.

- **Low fixed base** — start light.
- **Per-round GGR** reporting, fully transparent.
- **Scales with growth** — pay in step with revenue.
- Best when you're ramping volume.

— GET STARTED

The house always **settles.**

Spin up a sandbox with all 68 games today, or watch a real casino run on the platform. Production is a two-gate go-live away — for licensed operators only.
